Player counts

In this project, there are a total of 85 wingers considered, with

- 22 wingers in 12 teams in the English FA Women's Super League
- 22 wingers in 12 teams in the German Frauen Bundesliga
- 26 wingers in 16 teams in the Spanish Liga F
- 15 wingers in 10 teams in the Italian Serie A Women

Results

Results for 2 clusters

Breakdown of results by league

league	FA Women's Super League	Frauen Bundesliga	Liga F	Serie A Women
kmeans_2_cluster				
0	10	8	13	7
1	12	14	13	8

For all leagues, the split was roughly the same of 60:40 ratio between cluster 1 and cluster 0.

Breakdown of results by features

- Cluster 1 wingers show positive signature towards low passes progressive passes, switch passes, crosses, cutbacks, inside and into opposition box passes, forward carrying, and involving at higher and wider positions (including receiving, dribbling, pressuring, and turnovers), and counterpress actions in opposing half.
- On the other hand, cluster 0 wingers show positive signature in ground passes, change in passing length under pressure, backward carrying.

Therefore, based on these results,

- Cluster 1 wingers are more advanced wingers who involve much higher and are more creative.
- Cluster 0 wingers can be seen as wide midfielders.

Results for 3 clusters

Breakdown of results by league

league	FA Women's Super League	Frauen Bundesliga	Liga F	Serie A Women
kmeans_3_cluster				
0	11	14	13	8
1	6	4	7	4

league	FA Women's Super League	Frauen Bundesliga	Liga F	Serie A Women
kmeans_3_cluster				
2	5	4	6	3

Rougly 50% of players ended up in cluster 0 for all leagues, while the rest were quite evenly splitted between cluster 1 and cluster 2.

Comparing results for 2 clusters against 3 clusters

kmeans_3_cluster	0	1	2
kmeans_2_cluster			
0	3	18	17
1	43	3	1

It seems like cluster 1 of k = 2 aligns to cluster 0 of k = 3, while cluster 0 of k = 2 equally splits out into k = 3 cluster 1 and 2.

Breakdown of results by features

- Cluster 0 wingers made more progressive passes, low passes, switch passes, crosses, cutbacks, passes into and inside opposition box, forward carries, and involve at higher and wider locations (receiving, dribbling, pressing, turnovers), especially with counterpress actions in opposing half.
- In contrast, cluster 1 wingers had higher backward passing percentage, ground passing percentage, average carry distance and progressive carries into final third. Carrying was their main method of progression.
- While for cluster 2 wingers, they stood out for forward passing percentage, especially into the final third, average pass length and change in passing length under pressure, deeper and more central receiving and dribbling locations. Passing was their main method of progression. Their average carry speed was the slowest among the three clusters.

Following all the information, the following conclusions can be made:

- Similar to cluster 0 of k = 2, cluster 0 of k = 3 can be seen as advanced wingers.
- Cluster 1 can be seen as wide conservative carrying midfielders.
- Cluster 2 can be seen as wide playmakers.

Breakdown of results by players

Findings and radar plots for each winger are in their own files:

- Caroline Graham Hansen - Barcelona
- Carlotta Wamser - Koln
- Grace Clinton - Tottenham Hotspur
- Jule Brand - VfL Wolfsburg
- Klara Buhl - Bayern Munchen
- Nikita Parris - Manchester United

- Beth Mead - Arsenal
