Findings

Mead was closely clustered with wingers for k = 2, but then more confidently clustered with wide playmakers for k = 3. This can be shown in her longer and more progressive passes into the box, while she did not attempt too many crosses. While she carried forward much, her carry speed and distance were not high. She received and dribbled at higher locations, while her pressure locations were not too high although she had quite high number of counterpress actions in opposing half.
